

Robotic Process Automation (RPA)

Host: Vidhu Chaudhary
Co-host: Vanshika Kapoor
The Girl Code, Rajasthan

Hello!

We are Vidhu and Vanshika

We are here to tell you all there is to know about RPA.

You can find us at

vc.vidhuchaudhary@gmail.com

1.

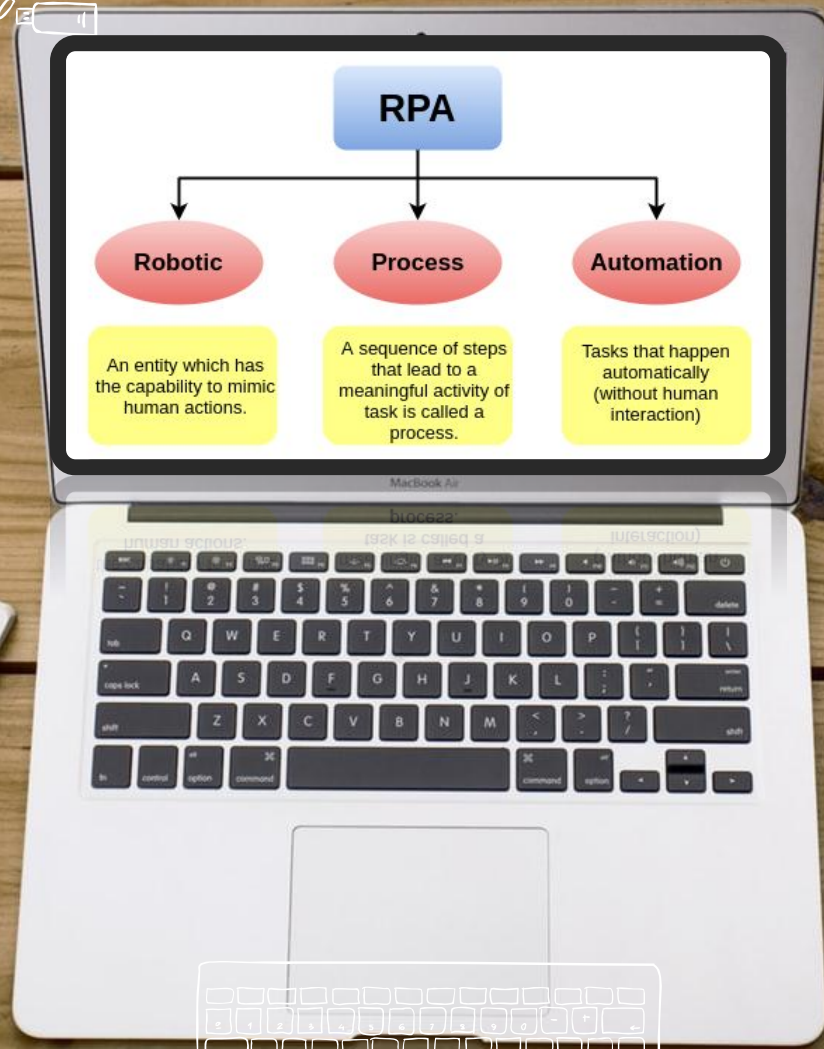

WHAT IS RPA ?

Robotic Process Automation, is the use of software with artificial intelligence and machine learning capabilities, to handle high volume, repeatable tasks that previously required humans to perform.

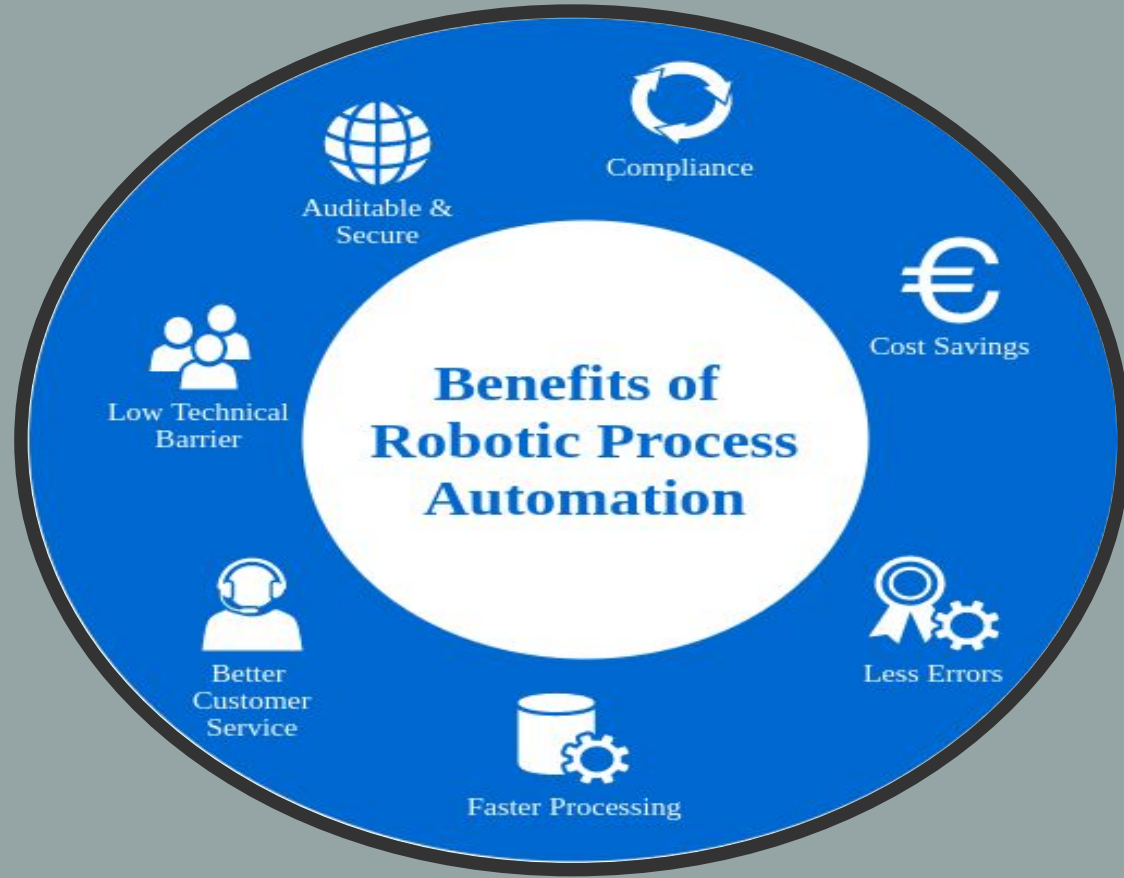

- 
- ❌ RPA is also sometimes referred to as a bot which mimics human work by entering data, calculating tasks etc.
 - ❌ The software used to implement RPA sits on top of the IT structure of an organization.

Benefits of RPA

Robotic Spectrum

Robotics Spectrum

Integrated Desktop

Consolidating data from multiple sources into a single view to complete a process

Process Automation

Applying technology to manipulate existing application software to complete a process

Digital/Virtual Assistance

Computer-generated character, which simulates a conversation to answer questions or queries and provide guidance

Cognitive Computing/ Autonomic Solutions

Systems that gain knowledge from data as "experience" and apply what is learned in upcoming situations

Features of RPA

1 Scalability

2 Speed

3 Reliability

4 Simplicity

5 Intelligence

6 Enterprise class

Capabilities of RPA

- To build and manage an enterprise-wide RPA program, you need technology that can go far beyond simply helping you automate a single process. You require a platform that can help you create and manage a new enterprise-wide capability and help you become a fully automated enterprise. Your RPA technology must support you end-to-end, from discovering great automation opportunities everywhere, to quickly building high-performing robots, to managing thousands of automated workflows.

Getting started with RPA

Lay the foundation to move forward on a transformative RPA initiative. Prove out RPA's benefits through pilot projects and quick wins.

1

2

Scale automation by focusing first on top-down, cross-enterprise opportunities with big impact, and build out your automation skills along with your organization (like Automation Center of Excellence (COE))

Become a fully automated enterprise by capturing automation opportunities across the enterprise, from the top-down and the bottom up.

3

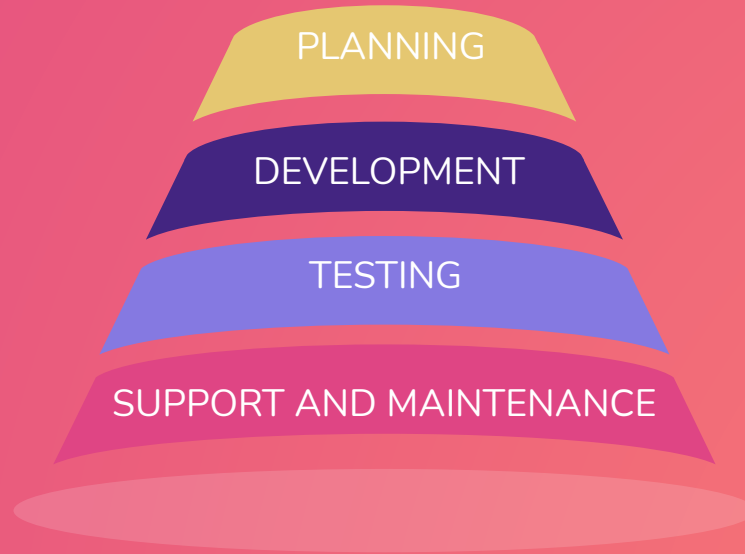

RPA Implementation Process

- List out Processes To Automate
- Perform Feasibility Assessment
- Readjust
- Gather User Stories
- Start Development Process
- Test RPA Process
- Reconfirm and Deploy

Funnel Diagram

Examples of RPA

UI Automation

Computer-Vision Driven Automation for **Web** and **Desktop**

Key commands:

- XClick (**Image**)
- XClick (ocr=**text**)
- XType (key sequence)

True mouse and keyboard simulation, true native events (no Javascript click events)
